

- PRESS RELEASE -

CST and AWR Joint Seminar Series

to demonstrate the power of combining best in class

3D passive and circuit simulation

CST and AWR have teamed up for a joint seminar series in the US. The series will explain and demonstrate the power of combining best in class 3D passive and circuit simulation in a seamless flow for the design engineer. Background information on 3D microwave/RF simulation and circuit simulation will be presented by both vendors, with an emphasis on areas where both tools are required including: high speed circuits and packaging, signal integrity, RF modules and active driving of passive devices.

Live demonstrations of the latest technology and the link between the tools will be given and design engineers can expect to gain a unique insight into a simplified and faster design flow.

"This seminar series is an excellent event for engineers to come along and experience the state of the art in high frequency electronic design simulation from two of the leading developers of the technology" commented Jonathan Oakley, Vice President of Sales & Support, CST of America.

Dates include:

North America

- 1st March, Austin, TX
- 2nd March, Richardson, TX
- 8th March, Somerset, NJ
- 30th March, Chicago, IL
- 19th April, Burlington, MA

For more information and to register, go to: <http://web.appwave.com/seminars/US/>

About CST

CST is one of the two largest suppliers of electromagnetic simulation software and has continuously enhanced its position as market and technology leader in 3D Time Domain simulation. With over 100 employees worldwide and a network of qualified distributors, 140 people are dedicated to the development and support of its EM products in more than 30 countries. Information about CST is available on the web at www.cst.com.
