CST Announces 2016 Tutorial Webinar Series “Getting Ahead With...”

Darmstadt, Germany, January 12, 2016: CST – Computer Simulation Technology (CST) announces a series of webinars showing the best way to get ahead with EM simulation. These webinars will cover workflows in CST tools for a range of applications in the fields of microwaves and RF, EMC and electronic design.

The webinars will benefit both existing CST customers who want to improve or update their workflows, and engineers who would like the opportunity to see how market-leading software can be employed to simplify design tasks.

The webinars will demonstrate standard workflows for some common design challenges, with examples to show how simulation can be used to design and optimize products. The tutorial style also offers an easy way for the user to learn about the capabilities of extensions to CST STUDIO SUITE, and how these can be incorporated into their workflow. The presenters are simulation experts, with years of experience of using and developing these tools.

The initial set of webinars comprises:

- February 04, 2016: [Getting Ahead with Antenna Magus - Evaluating off-the-shelf antennas, improving existing designs and sharing information efficiently](#)
- February 11, 2016: [Getting Ahead with Hybrid Solutions for Antenna Installed Performance Analysis](#)
- February 18, 2016: [Getting Ahead with Coupled 3D Field and Circuit Simulation](#)
- February 25, 2016: [Getting Ahead with Antenna Array Design and Simulation](#)
- March 03, 2016: [Getting Ahead with High-Speed Digital Simulation and Measurement](#)

“The excellent response to our “Getting Ahead With...” webinar series last year clearly showed that there is a demand for this more hands-on type of presentation. This encouraged us to continue this success for our series this year,” said Dr. Martin Timm, Director of Global Marketing, CST. *“These webinars are designed to show new and experienced users how they can use the simulation workflows*

efficiently in their day-to-day work. The “Getting Ahead With...” webinars complement our upcoming update webinars and CST webinar series which focus on the latest features and more specific applications.”

Registration for the “Getting Ahead With...” series is now open at <https://www.cst.com/webinars>.

About CST

Founded in 1992, CST offers the market’s widest range of 3D electromagnetic field simulation tools through a global network of sales and support staff and representatives. CST develops CST STUDIO SUITE, a package of high-performance software for the simulation of electromagnetic fields in all frequency bands, and also sells and supports complementary third-party products. Its success is based on a combination of leading edge technology, a user-friendly interface and knowledgeable support staff. CST’s customers are market leaders in industries as diverse as telecommunications, defense, automotive, electronics and healthcare. Today, the company enjoys a leading position in the high-frequency 3D EM simulation market and employs 300 sales, development, and support personnel around the world.

CST STUDIO SUITE is the culmination of many years of research and development into the most accurate and efficient computational solutions for electromagnetic designs. From static to optical, and from the nanoscale to the electrically large, CST STUDIO SUITE includes tools for the design, simulation and optimization of a wide range of devices. Analysis is not limited to pure EM, but can also include thermal and mechanical effects and circuit simulation. CST STUDIO SUITE can offer considerable product to market advantages such as shorter development cycles, virtual prototyping before physical trials, and optimization instead of experimentation.

Further information about CST is available on the web at <https://www.cst.com>.
